

Title of your presentation

Your name here

February 18, 2021

Contents

1 First subject

- This subsection is not in the progress bar but is in the table of contents!

2 Applications

3 Also

What everyone should know before I start

In the frame environment you can do what you are used to in \LaTeX . For example nice formulas like

$$E = \frac{p^2}{2m} \quad (1)$$

$$E_{rel}^2 = m^2 c^4 + p^2 c^2 \quad (2)$$

Important

It is **I M P O R T A N T** to be able to **emphasise** *in different ways!*

Let's continue

Sometimes it is a shame if everything you want to say is already on the slide.

Theorem

You do not yet know the proof of this theorem.

Proof

The proof is here.

But we can fix this!
Let's try this again.

Again!

Theorem

You do not yet know the proof of this theorem.

Again!

Theorem

You do not yet know the proof of this theorem.

Proof

The proof is here.

Again!

Theorem

You do not yet know the proof of this theorem.

Proof

The proof is here.

Much better!

More advanced

We can even make the text disappear.

More advanced

We can even make the text disappear.
Peekaboo!

More advanced

We can even make the text disappear.

Peekaboo!

Go and seek! (by lack of a better translation of *Wie niet weg is is gezien!*)

More advanced

We can even make the text disappear.
And let's go on...

Enumerations can look better this way as well

- 10!

Enumerations can look better this way as well

- Ready or not here I come!

We can also place columns next to each other.

Also cool

More indents in your code.

Attention!

A block for even more *emphasis!*
Just differently colored.

We can even include pictures!

Figure: A picture you might recognise.

Also

Don't forget to compile, the table of contents and the progress bar will need more than one compilation to be updated correctly.

At the end of a presentation you thank your audience and leave room for questions.

Then your presentation is done!
